## 1 Arithmetic

This section is all about arithmetic. You'll find that you can basically assume anything about arithmetic that you learned in high school algebra or earlier.

### 1.1 Definitions

Arithmetic Expression of Real Numbers
Definition
An arithmetic expression of real numbers is an expression made up of real numbers, variables representing real numbers, addition, multiplication, subtraction, division, exponentiation, and logarithms.

| Zero |
| :--- |
| Zero ( 0, the additive identity $)$ is the constant real number such that for any arithmetic expression $X$, |
| $0+X=X=X+0$. |

| One |
| :--- |
| One (1, the multiplicative identity) is the constant real number such that for any arithmetic expression $X$, |
| $1 \cdot X=X=X \cdot 1$. |

## 2 Equality

This section is all about equalities. You'll find that you can basically assume anything about arithmetic that you learned in high school algebra or earlier.

### 2.1 Definitions

| Equality for Real Numbers |
| :--- |
| If $X$ and $Y$ are two real numbers, then $X=Y$ (" $X$ equals $\left.Y^{\prime \prime}\right)$ when both expressions "evaluate" to the |
| same real number. |
| (This means you should use what you learned in high school about these types of expressions.) |

| Inequality for Real Numbers | DEFINITION |
| :--- | ---: |
| If $X$ and $Y$ are two real numbers, then $X \neq Y$ (" $X$ does not equal $Y$ ") when $\neg(X=Y)$. |  |

### 2.2 Theorems

| Reflexivity of Equality for Real Numbers | THEOREM |
| :--- | ---: |
| If $x$ is a real number, then $x=x$. |  |

| Symmetry of Equality for Real Numbers | THEOREM |
| :--- | ---: |
| If $x, y$ are real numbers, then $x=y \Longleftrightarrow y=x$. |  |

| Transitivity of Equality for Real Numbers | THEOREM |
| :--- | ---: |
| If $x, y$, and $z$ are real numbers, then $(x=y \wedge y=z) \Longrightarrow x=z$. |  |

If $x$ is a real number, then:

- $x+0=x=0+x$
- $x \cdot 1=x=1 \cdot x$
- $x^{0}=1$ (unless $x$ evaluates to 0 , in which case $x^{0}$ is undefined)
- $0^{x}=0$ (unless $x$ evaluates to 0 , in which case $0^{x}$ is undefined)
- $1^{x}=1$
- $x / 1=x$

| Domination for Real Numbers | THEOREM |
| :--- | :--- |
| If $x$ is a real number, then: |  |
| - $x \cdot 0=0=0 \cdot x$ |  |
| - $x \cdot 1=x=1 \cdot x$ |  |

## Inverse Operations for Real Numbers

If $a$ and $b$ are real numbers, then:

- $a-b=a+(-b)$
- $a \cdot \frac{b}{a}=b$

## Inverses for Real Numbers

If $x$ and $b$ are real numbers, then:

- $x+(-x)=0=(-x)+x$
- $x \cdot \frac{1}{x}=1=\frac{1}{x} \cdot x$ (unless $x$ evaluates to 0$)$
- $b^{\log _{b}(x)}=x$
- $\log _{b}\left(b^{x}\right)=x$
- $-(-x)=x$

| Associativity of Arithmetic Expressions | THEOREM |
| :--- | :---: |

If $x, y$, and $z$ are real numbers, then:

- $(x+y)+z=x+(y+z)$
- $(x y) z=x(y z)$

As a consequence, we can omit the parentheses in these expressions.

## Commutativity of Arithmetic Expressions

If $x$ and $y$ are real numbers, then:

- $x+y=y+x$
- $x y=y x$

If $a, b, c$, and $d$ are real numbers, then:

- $a(b+c)=a b+a c$
- $(a+b)(c+d)=a c+a d+b c+b d$

## Algebraic Properties of Real Numbers

If $a, b, c$, and $d$ are real numbers, then:

- $\frac{\frac{a}{c}}{\frac{c}{d}}=\frac{a d}{b c}$
- $\frac{a}{b}+\frac{c}{d}=\frac{a d+b c}{b d}$
- $\left(a^{b}\right)\left(a^{c}\right)=a^{b+c}$
- $\left(a^{b}\right)^{c}=a^{b c}$
- $\log _{c}(a b)=\log _{c}(a)+\log _{c}(b)$
- $\log _{c}\left(\frac{a}{b}\right)=\log _{c}(a)-\log _{c}(b)$

| Adding Equalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a=b$, and $c=d$, then $a+c=b+d$. |  |

| Multiplying Equalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a=b$, and $c=d$, then $a c=b d$. |  |

| Dividing Equalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a=b$, and $c \neq 0$, then $\frac{a}{c}=\frac{b}{c}$ |  |

| Subtracting Equalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a=b$, and $c=d$, then $a-c=b-d$. |  |

| Raising Equalities To A Power | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers and $a=b$, then $a^{c}=b^{c}$. |  |

| Log Change-Of-Base Formula | THEOREM |
| :--- | ---: |
| If $x, a$, and $b$ are real numbers, $x, a, b>0, a \neq 1, b \neq 1$, then $\log _{a}(x)=\frac{\log _{b}(x)}{\log _{b}(a)}$ |  |

| Powers of -1 | THEOREM |
| :--- | ---: |
| For any $n \in \mathbb{N},(-1)^{2 n}=1$ and $(-1)^{2 n+1}=-1$. |  |

## 3 Inequalities

This section is all about inequalities. You'll find that you can basically assume anything about arithmetic that you learned in high school algebra or earlier.

### 3.1 Definitions

| Less-Than for Real Numbers |
| :--- |
| If $x$ and $y$ are two real numbers, then $x<y$ (" $x$ is less than $y$ ") when $x$ "evaluates" to a smaller real |
| number than $y$ evaluates to. |
| (This means, use what you learned in high school about these types of expressions.) |

| Greater-Than for Real Numbers |
| :--- |
| If $x$ and $y$ are two real numbers, then $x>y$ (" $x$ is greater than $y$ ") when $y<x$. |

| Less-Than-Or-Equal-To for Real Numbers | Definition |
| :--- | :--- |
| If $x$ and $y$ are two real numbers, then $x \leq y$ (" $x$ is less than or equal to $y$ ") when $\neg(x>y)$. |  |

Greater-Than-Or-Equal-To for Real Numbers Definition

If $x$ and $y$ are two real numbers, then $x \geq y$ (" $x$ is greater than or equal to $y$ ") when $\neg(x<y)$.

### 3.2 Theorems

| Trichotomy for Real Numbers | THEOREM |
| :--- | ---: |
| If $x$ and $y$ are two real numbers, then $x=y \vee x<y \vee x>y$. |  |

| Antisymmetry of Inequality for Real Numbers | THEOREM |
| :--- | ---: |
| If $x, y$ are real numbers, then $(x \leq y \wedge y \leq x) \Longrightarrow x=y$. |  |

| Transitivity of Inequality for Real Numbers | THEOREM |
| :--- | ---: |
| If $x, y$, and $z$ are real numbers, then $(x<y \wedge y<z) \Longrightarrow x<z$. |  |

| Adding Inequalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a<b$ and $c<d$, then $a+c<b+d$. |  |

| Subtracting Inequalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers and $a<b$ and $c>d$, then $a-c<b-d$. |  |

| Multiplying (Positive) Inequalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $0<a<b$ and $0<c<d$, then $0<a c<b d$. |  |

| Multiplying (Negative) Inequalities | THEOREM |
| :--- | ---: |
| If $a$ and $b$ are real numbers, $a<0$, and $b<0$, then $a b>0$. |  |

If $a$ and $b$ are real numbers and $0<a<b$, then $\frac{1}{a}>\frac{1}{b}>0$.

| Same Sign |
| :--- |
| If $a$ and $b$ are real numbers and $a b>0$, then $a$ and $b$ are both positive or $a$ and $b$ are both negative. |

| Squares Are Positive | THEOREM |
| :--- | ---: |
| If $a$ is a real number, then $a^{2} \geq 0$. |  |

## 4 Absolute Value

This section is all about absolute values. In general, we don't care much about absolute values, but they're something easy to prove things about. So, we list out a bunch of theorems you may use here.

### 4.1 Definitions

| Absolute Value Definition |
| :--- | :--- |

If $x$ is a real number, then

$$
|X|= \begin{cases}X & \text { if } X \geq 0 \\ -X & \text { if } X<0\end{cases}
$$

### 4.2 Theorems

| Absolute Value Magnitude | THEOREM |
| :--- | ---: |
| If $x$ and $M$ are real numbers and $M \geq 0$, then $\|x\| \leq M \Longleftrightarrow-M \leq x \leq M$. |  |

| Positive Definite | THEOREM |
| :--- | ---: |
| If $x$ is a real number, then $\|x\| \geq 0$ and $\|x\|=0 \Longleftrightarrow x=0$. |  |

| Multiplying Absolute Values | THEOREM |
| :--- | ---: |
| If $x$ and $y$ are real numbers, then $\|x y\|=\|x\|\|y\|$ |  |

| Triangle Inequality | THEOREM |
| :--- | ---: |
| If $x$ and $y$ are real numbers, then $\|x+y\| \leq\|x\|+\|y\|$. |  |

## 5 Parity

This section is all about parity (even-ness/odd-ness) of integers. Unlike all the previous sections, we will use this as a starting point for discussing proofs. This means that you may only assume what is written here explicitly and nothing more.

### 5.1 Definitions

| Even | Definition |
| :--- | ---: |
| An integer $n$ is even iff $\exists k(n=2 k)$ |  |

| Odd | DEFINITION |
| :--- | ---: |
| An integer $n$ is odd iff $\exists k(n=2 k+1)$ |  |

| Perfect Square | Definition |
| :--- | ---: |
| An integer $n$ is a perfect square iff there exists an integer $x$ for which $n=x^{2}$. |  |

## Closure Under $\star$

A set $S$ is closed under a binary operation $\star$ iff $x \star x$ is an element of $S$.

### 5.2 Theorems

| $\mathbb{Z}$ is closed under + | THEOREM |
| :--- | :---: |
| The integers are closed under addition. |  |

| $\mathbb{Z}$ is closed under $x$ | THEOREM |
| :--- | ---: |
| The integers are closed under multiplication. |  |

| The square of every even integer is even | THEOREM |
| :--- | ---: |
| If $n$ is even, then $n^{2}$ is even. |  |

| The square of every odd number is odd | THEOREM |
| :--- | ---: |
| If $n$ is odd, then $n^{2}$ is odd. |  |

| The sum of two odd numbers is even | ThEOREM |
| :--- | ---: |
| If $n$ and $m$ are odd, then $n+m$ is even. |  |

No even number is the largest even number

| $\mathbb{Z}$ is closed under - | THEOREM |
| :--- | ---: |
| The integers are closed under subtraction. |  |

| $\mathbb{Z}$ is not closed under / | ThEOREM |
| :--- | ---: |
| The integers are not closed under division. |  |

| No Integer is Odd and Even | ThEOREM |
| :--- | ---: |
| If $n$ is an integer, $n$ is not both odd and even. |  |

## 6 Rationals

This section is all about rational numbers. We also use proofs about rational numbers as a starting point for discussing proofs. This means that you may only assume what is written here explicitly and nothing more.

### 6.1 Definitions

| Rational | Definition |
| :--- | :--- |
| An real number $x$ is rational iff there are two integers $p$ and $q \neq 0$ such that $x=\frac{p}{q}$. |  |

### 6.2 Theorems

| $\mathbb{Q}$ is closed under + | Theorem |
| :--- | ---: |
| The rationals are closed under addition (and subtraction) |  |

| $\mathbb{Q}$ is closed under $\times$ | THEOREM |
| :--- | ---: |
| The rationals are closed under multiplication |  |

| $\mathbb{R} \backslash \mathbb{Q}$ is not closed under + | Theorem |
| :--- | ---: |
| The irrationals are not closed under addition. |  |

## 7 Sets

### 7.1 Definitions

| The Set of Natural Numbers | Definition |
| :--- | ---: |
| $\mathbb{N}=\{0,1,2, \ldots\}$ is the set of Natural Numbers |  |

| The Set of Integers | Definition |
| :--- | ---: |
| $\mathbb{Z}=\{\ldots,-2,-1,0,1,2, \ldots\}$ is the set of Integers. |  |

| The Set of Rationals |
| :--- |
| $\mathbb{Q}=\left\{\frac{p}{q}: p, q \in \mathbb{Z} \wedge q \neq 0\right\}$ is the set of Rational Numbers. |

| The Set of Reals | Definition |
| :--- | ---: |
| $\mathbb{R}$ is the set of Real Numbers. |  |

If $A$ and $B$ are sets, then $x \in A$ (" $x$ is an element of $A$ ") means that $x$ is an element of $A$, and $x \notin A$ (" $x$ is not an element of $A^{\prime \prime}$ ) means that $x$ is not an element of $A$.

## Set Equality

Definition
If $A$ and $B$ are sets, then $A=B$ iff $\forall x(x \in A \Longleftrightarrow x \in B)$.

| Subset and Superset |
| :--- |
| If $A$ and $B$ are sets, then $A \subseteq B(" A$ is a subset of $B$ ") means that all the elements of $A$ are also in $B$, |
| and $A \supseteq B$ (" $A$ is a superset of $B$ ") means that all the elements of $B$ are also in $A$. |

## Set Comprehension

Definition
If $P(x)$ is a predicate, then $\{x: P(x)\}$ is the set of all elements for which $P(x)$ is true. Also, if $S$ is a set, then $\{x \in S: P(x)\}$ is the subset of all elements of $S$ for which $P(x)$ is true.

| Set Union | Definition |
| :--- | :--- |
| If $A$ and $B$ are sets, then $A \cup B$ is the union of $A$ and $B . A \cup B=\{x: x \in A \vee x \in B\}$. |  |

Set Intersection

If $A$ and $B$ are sets, then $A \cap B$ is the intersection of $A$ and $B . A \cap B=\{x: x \in A \wedge x \in B\}$.

| Set Difference |
| :--- |
| If $A$ and $B$ are sets, then $A \backslash B$ is the difference of $A$ and $B . A \backslash B=\{x: x \in A \wedge x \notin B\}$. |

| Set Symmetric Difference |
| :--- |
| If $A$ and $B$ are sets, then $A \oplus B$ is the symmetric difference of $A$ and $B . A \oplus B=\{x: x \in A \oplus x \in B\}$. |

## Set Complement <br> Definition

If $A$ is a set, then $\bar{A}$ is the complement of $A$. If we restrict ourselves to a "universal set", $\mathcal{U}$ (a set of all possible things we're discussing), then $\bar{A}=\{x \in \mathcal{U}: x \notin A\}$.

| Brackets $n$ |
| :--- |
| If $n \in \mathbb{N}$, then $[n]$ ("brackets $n$ ") is the set of natural numbers from 1 to $n .[n]=\{x \in \mathbb{N}: 1 \leq x \leq n\}$. |

Cartesian Product Definition
If $A$ and $B$ are sets, then $A \times B$ is the cartesian product of $A$ and $B . A \times B=\{(a, b): a \in A, b \in B\}$.

| Powerset | Definition |
| :--- | ---: |
| If $A$ is a set, then $\mathcal{P}(A)$ is the power set of $A . \mathcal{P}(A)=\{S: S \subseteq A\}$. |  |

### 7.2 Theorems

| Subset Containment | THEOREM |
| :--- | ---: |
| If $A$ and $B$ are sets, then $(A=B) \Longleftrightarrow(A \subseteq B \wedge B \subseteq A)$. |  |

| Russell's Paradox | Theorem |
| :--- | ---: |
| The set of all sets that do not contain themselves does not exist. That is, $\{x: x \notin x\}$ does not exist. |  |

| DeMorgan's Laws for Sets | Theorem |
| :--- | ---: |
| If $A$ and $B$ are sets, then $\overline{A \cup B}=\bar{A} \cap \bar{B}$ and $\overline{A \cap B}=\bar{A} \cup \bar{B}$. |  |

| Distributivity for Sets | THEOREM |
| :--- | ---: |
| If $A$ and $B$ are sets, then $A \cap(B \cup C)=(A \cap B) \cup(A \cap C)$ and $A \cup(B \cap C)=(A \cup B) \cap(A \cup C)$. |  |

| $A \cap B \subseteq A$ | Theorem |
| :--- | ---: |
| If $A$ and $B$ are sets, then $A \cap B \subseteq A$. |  |

## 8 Modular Arithmetic

### 8.1 Definitions

| $a \mid b$ (" $a$ divides $b$ ") | Definition |  |
| :--- | :--- | ---: |
| For $a, b \in \mathbb{Z}$, where $a \neq 0:$ | $a \mid b$ iff $\exists(k \in \mathbb{Z}) b=k a$ |  |

| $a \equiv_{m} b(" a$ is congruent to $b$ modulo $m)$ | Definition |
| :--- | ---: |
| For $a, b \in \mathbb{Z}, m \in \mathbb{Z}^{+}:$ | $a \equiv_{m} b$ iff $m \mid(a-b)$ |

## Multiplicative group of integers mod $m$

Definition
The multiplicative group of integers mod $m$ is made up of the set of integers relatively prime to $m$ from the set $\{0,1, \ldots, m-1\}$ with multiplication performed $\bmod m$, and is denoted $\mathbb{Z}_{m}$.

| Multiplicative inverse | Definition |
| :--- | ---: |
| The multiplicative inverse of an element $n \in \mathbb{Z}_{m}$ is the unique element $a \in \mathbb{Z}_{m}$ such that $a n \equiv 1$. |  |

### 8.2 Theorems

## Division Theorem

If $a \in \mathbb{Z}$ and $d \in \mathbb{Z}^{+}$, then there exist unique $q, r \in \mathbb{Z}$, where $0 \leq r<d$ such that $a=d q+r$.
We call $q=a \operatorname{div} d$ and $r=a \bmod d$.

| Relation Between Mod and Congruences | Theorem |
| :--- | ---: |
| If $a, b \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $a \equiv_{m} b \Longleftrightarrow a \bmod m=b \bmod m$. |  |

| Adding Congruences | ThEOREM |
| :--- | ---: |
| If $a, b \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $\left(a \equiv_{m} b \wedge c \equiv_{m} d\right) \Longrightarrow a+c \equiv_{m} b+d$. |  |

| Multiplying Congruences | ThEOREM |
| :--- | ---: |
| If $a, b \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $\left(a \equiv_{m} b \wedge c \equiv_{m} d\right) \Longrightarrow a c \equiv_{m} b d$. |  |

| Squares are congruent to 0 or $1 \bmod 4$ | THEOREM |
| :--- | ---: |
| If $n \in \mathbb{Z}$, then $n^{2} \equiv_{4} 0$ or $n^{2} \equiv_{4} 1$. |  |

| Additivity of $\bmod$ | THEOREM |
| :--- | ---: |
| If $a, b \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $(a+b) \bmod m=((a \bmod m)+(b \bmod m)) \bmod m$ |  |

| Multiplicativity of $\bmod$ | ThEOREM |
| :--- | ---: |
| If $a, b \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $(a b) \bmod m=((a \bmod m)(b \bmod m)) \bmod m$ |  |

Base $b$ Representation of Integers

Suppose $n$ is a positive integer (in base $b$ ) with exactly $m$ digits.
Then, $n=\sum_{i=0}^{m-1} d_{i} b^{i}$, where $d_{i}$ is a constant representing the $i$-th digit of $n$.

| Raising Congruences To A Power | THEOREM |
| :--- | ---: |
| If $a, b, i \in \mathbb{Z}$ and $m \in \mathbb{Z}^{+}$, then $a \equiv_{m} b \Longrightarrow a^{i} \equiv_{m} b^{i}$. |  |

## 9 Functions

### 9.1 Definitions

## Function

A function $f: X \rightarrow Y$ is a mapping from each element of a set $X$ to exactly one element of $Y$. The set $X$ is called the domain of $f$ and the set $Y$ is called the codomain.

## Injection

A function $f: X \rightarrow Y$ is called an injection iff, for all $x, y \in X, f(x)=f(y) \Longrightarrow x=y$ (i.e., $f$ does not map distinct elements of its domain to the same element in its codomain).

A function $f: X \rightarrow Y$ is called a surjection iff for all elements $y \in Y$, there exists $x \in X$ such that $f(x)=y$ (i.e., every element in its codomain $Y$ is mapped to by at least one element of its domain $X$ ).

## Bijection

Definition
A function $f: X \rightarrow Y$ is called a bijection iff it is injective and surjective (i.e., it defines a one-to-one correspondence between elements of $X$ and $Y$ ).

| Strictly Increasing | Definition |
| :--- | ---: |
| A function $f: X \rightarrow \mathbb{R}$ defined on $X \subseteq \mathbb{R}$ is increasing iff $x<y \Longrightarrow f(x) \leq f(y)$. If this inequality is <br> strict (i.e. $x<y \Longrightarrow f(x)<f(y))$, the function is strictly increasing. |  |

## 10 Primes

### 10.1 Definitions

| Factor | Definition |
| :--- | :--- |
| A factor of an integer $n$ is an integer $f$ such that $\exists x(n=f x)$. Alternatively, $f$ is a factor of $n$ iff $f \mid n$. |  |

| Prime | DEFINITION |
| :--- | :---: |
| A integer $p>1$ is prime iff the only positive factors of $p$ are 1 and $p$. |  |

Composite
Definition
A integer $p>1$ is composite iff it's not prime. That is, an integer $p>1$ is composite iff it has a factor other than 1 and $p$.

## Trivial Factor

Definition
A trivial factor of an integer $n$ is 1 or $n$. We call it a "trivial factor", because all numbers have these factors.

Two integers, $a$ and $b$, are coprime (or relatively prime) if the only positive integer that divides both of them is 1 . That is, their prime factorizations don't share any primes.

### 10.2 Theorems

Fundamental Theorem of Arithmetic
Theorem
Every natural number can be uniquely expressed as a product of primes raised to powers.

| All Composite Numbers Have a Small Non-Trivial Factor | Theorem |
| :--- | ---: |
| If $n$ is a composite number, then it has a non-trivial factor $f \in \mathbb{N}$ where $f \leq \sqrt{n}$. |  |

| Euclid's Theorem | THEOREM |
| :--- | :---: |
| There are infinitely many primes. |  |

## 11 GCD

### 11.1 Definitions

## GCD (Greatest Common Divisor)

The gcd of two integers, $a$ and $b$, is the largest integer $d$ such that $d \mid a$ and $d \mid b$.

```
Euclidean Algorithm
    Algorithm
gcd(a, b) {
    if (b == 0) {
        return a;
    }
    else {
        return gcd(b, a mod b);
    }
```

### 11.2 Theorems

GCD Property

For any $a, b \in \mathbb{Z}^{+}, \operatorname{gcd}(a, b)=\operatorname{gcd}(b, a \bmod b)$.

## 12 Summations

### 12.1 Closed Forms

Gauss Summation
For all $n \in \mathbb{N}, \sum_{i=0}^{n} i=\frac{n(n+1)}{2}$.

Infinite Geometric Series
For $-1<x<1, \sum_{i=0}^{\infty} x^{i}=\frac{1}{1-x}$.

Finite Geometric Series
For $-1<x<1$ and $n \in \mathbb{N}, \sum_{i=0}^{n} x^{i}=\left(\frac{1}{1-x}\right)-\left(\frac{x^{n+1}}{1-x}\right)=\frac{1-x^{n+1}}{1-x}$

### 12.2 Theorems

Binomial Theorem
For all $x, y \in \mathbb{R}$ and $n \in \mathbb{N},(x+y)^{n}=\sum_{k=0}^{n}\binom{n}{k} x^{n-k} y^{k}$.
